MARKET MONITOR

Chart Of The Week: Heading South

Source: US Census Bureau, Goldman Sachs Asset Management. As of July 1, 2023.

MARKET SUMMARY

GLOBAL EQUITIES: US equities rose after the FOMC announced no change to key interest rates at the May meeting. The S&P 500 ended last week 0.56% higher but finished –4.16% lower in April, the worst month for the index since September 2023, as Fed chair Powell noted a lack of further disinflationary progress in his post-meeting remarks. Elsewhere, the STOXX 600 ended last week –0.31% lower as Euro area inflation printed above consensus expectations.

COMMODITIES: Oil prices dropped to more than three-month lows on continued optimism around a potential ceasefire in the Middle East. Ultimately, WTI and Brent crude oil prices finished lower at \$78.11 and \$82.96/bbl, respectively, as crude inventories in the US increased at their fastest weekly pace since March, versus consensus expectations for a decline. Meanwhile, gold prices continued their decline, ending last week lower at \$2330.60/troy oz.

FIXED INCOME: US yields rose early last week before paring gains on the back of below-consensus labor data. The 2-Year and 10-Year US Treasury yields finished lower at 4.80% and 4.50%, respectively, as nonfarm payrolls came in 63k lower than expected by consensus while the unemployment rate in the US printed below 4.0% for the 27th consecutive month, tying the longest streak on record. Across the pond, the 10-Year UK Gilt yield ended last week lower at 4.22%.

FX: The US dollar depreciated against a basket of currencies last week on weak economic data. Ultimately, the US dollar index ended last week – 1.02% lower as manufacturing and services data both printed below consensus expectations, with both indices falling back into contractionary territory. Outside the US, the Japanese yen hit 34-year lows against the greenback before strengthening on the week to ¥152.91.

HOUSING

The US population grew by 0.5% from July 2022 to July 2023 with key regional divergence. Southern states saw the largest increase of 1.1%, while the Northeast was the only region with negative growth of -0.1%, lead by a -0.5% decrease in New York. In 1Q24, the residential sector was a bright spot for the US economy, and despite some near-term challenges, we anticipate long-term opportunities in housing and mortgages on the horizon as consumer credit evolves.

ECONOMIC SUMMARY

MONETARY POLICY: The FOMC left rates unchanged at its May meeting and announced that it will start slowing the pace of balance sheet runoff in June. The committee again noted that "inflation has eased over the past year" but updated the statement to acknowledge that "there has been a lack of further progress" in recent months. Our colleagues in GIR continue to forecast two 25 bp rate cuts in 2024, occurring in July and November.

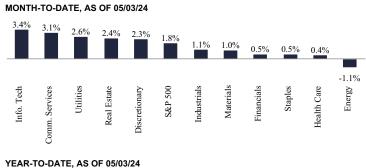

LABOR: The US economy created 175k jobs in April, below consensus expectations for a modestly larger increase. Job openings also decreased by more than consensus expectations to 8.488M in March, with the construction and financial activities sectors experiencing the biggest declines. Initial jobless claims were unchanged at 208k in the week ended April 27 while the unemployment rate surprised to the upside, rising slightly to 3.9%. Meanwhile in the Euro area, the March unemployment rate remained unchanged at 6.5%.

INFLATION: In the Euro area, core inflation printed slightly above consensus expectations at 2.7% year-over-year, while headline inflation remained unchanged at 2.4% year-over-year. GIR continues to expect the ECB to deliver its first cut in June but now anticipates cuts to proceed at a quarterly pace until the policy rate reaches 2.25%.

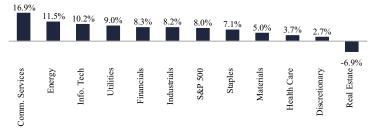

ACTIVITY: The ISM manufacturing index declined to 49.2 in April, below consensus expectations. The underlying composition was mixed, with decreases in the new orders and production components but an increase in the employment component. In the Euro area, 1Q GDP printed at 0.3% quarter-over-quarter, above consensus expectations. Stronger-than-expected 1Q activity data suggests the Euro area economy might be recovering after over a year of stagnation.

<u>Risk Considerations:</u> Equity securities are more volatile than bonds and subject to greater risks. Small and mid-sized company stocks involve greater risks than those customarily associated with larger companies. Bonds are subject to interest rate, price and credit risks. Prices tend to be inversely affected by changes in interest rates. Unlike stocks and bonds, U.S. Treasuries securities are guaranteed as to payment of principal and interest if held to maturity. High yield fixed income securities are considered speculative, involve greater risk of default, and tend to be more volatile than investment grade fixed income securities. Income from municipal securities is generally free from federal taxes and state taxes for residents of the issuing state. While the interest income is tax-free, capital gains, if any, will be subject to taxes. Income for some investors may be subject to the federal Alternative Minimum Tax (AMT).

Investments in foreign securities entail special risks such as currency, political, economic, and market risks. These risks are heightened in emerging markets. Investments in commodities may be affected by changes in overall market movements, commodity index volatility, changes in interest rates or factors affecting a particular industry or commodity.

The currency market affords investors a substantial degree of leverage. This leverage presents the potential for substantial profits but also entails a high degree of risk including the risk that losses may be similarly substantial. Such transactions are considered suitable only for investors who are experienced in transactions of that kind. Currency fluctuations will also affect the value of an investment.
